1. Game Overview

Introduction

FIFA Online Football is a multiplayer sports game where players compete against each other in real-time football matches. Each player controls a football team and attempts to score more goals than the opponent before the match ends.

Gameplay Mechanics

- Team selection
- Real-time multiplayer matches
- Player movement and ball control
- Passing and shooting
- Goal scoring
- Match timer
- Score tracking

Main Features

- Online Multiplayer Matches
- Team Management
- Matchmaking
- Score System
- Real-Time Networking

- User Interface
-

2. High-Level Architecture

The game is divided into several major systems.

Main Systems

1. Player System

Responsible for managing football players and their actions.

2. Team System

Manages team formation, player positions, and team statistics.

3. Matchmaking System

Matches players online and creates game sessions.

4. Match Management System

Controls match start, halftime, full-time, and match results.

5. Ball Physics System

Handles ball movement, passing, shooting, and collisions.

6. Score System

Tracks goals and determines the winner.

7. Network System

Synchronizes player actions between clients and server.

8. UI System

Displays scoreboards, timers, menus, and match statistics.
